### AutoCAD For PC

In December 2010, AutoCAD 2013 was released, and included several new features, including a drawing engine that can access any database and allows for dynamic (animated) 3D drawings.

AutoCAD 2013 marked the first release of AutoCAD that was not an extension of AutoCAD LT, the former subscription-based CAD program.

AutoCAD is not available in all countries; and is available only as part of a bundle with other programs from Autodesk, such as AutoCAD LT or AutoCAD for Architecture. The current version is AutoCAD 2020 (2019). History AutoCAD was initially intended to be a product that would compete with the new generation of personal computer-based design workstations, which could run at an affordable price and deliver very high performance. AutoCAD was released on January 16, 1983, and was priced at \$99 (equivalent to \$882.62 in 2012). The initial release of AutoCAD was available in both the English and French languages. The price of AutoCAD was \$99, plus an optional perpetual license (sometimes referred to as software "fees")

that was sold annually for \$35. In addition to a computer workstation, AutoCAD required a dedicated graphics display and a utility disc (CD-ROM) to install and run it. In August 1988, AutoCAD ran on a Microsoft Windows NT operating system, and was bundled with the operating system and an Office suite. This was the first time the AutoCAD software had been released as a stand-alone application for Windows and thus became a commercial desktop product (similar to Microsoft Visio and Microsoft Office). In 1995, AutoCAD ran on Microsoft Windows 95 and was available as a stand-alone application (as opposed to a bundled application with the operating system). In early 2006, AutoCAD ran on the Mac OS X operating system, and included version 13 of the application and the accompanying AutoCAD Exchange database. AutoCAD 2000 was sold as part of a bundle of AutoCAD, AutoCAD Exchange and AutoCAD Map Design software. AutoCAD is also available as a part of a bundle with other programs from Autodesk, such as AutoCAD LT and AutoCAD for Architecture. In 1992, as the first CAD package for Windows, AutoCAD was created using Microsoft Visual Basic for Applications, or VBA. VBA was used as it was efficient to automate the drawing tasks of AutoCAD.

VBA was then integrated with AutoCAD as a subsystem in AutoCAD 2000. From 1992 to 1994, several new versions of AutoCAD were released, including AutoCAD 2000, AutoCAD 2001, AutoCAD 2002, and AutoCAD LT. The current version of AutoCAD is 2016. The following table provides a list of the most notable products based on AutoCAD and their version numbers:
