Since its introduction, AutoCAD has evolved to include many more features, become more sophisticated, and remain at the forefront of the field. Today, it is the industry-standard software for drafting and analysis of architectural, engineering, and construction (AEC) drawings and animations. From that initial release, AutoCAD became the only commercial CAD application that was used in school, an important step that contributed to its success and allowed AutoCAD to be adopted by architects, engineers, and construction companies throughout the world. Since that time, AutoCAD has been used for all types of architectural and engineering designs, including: The New York State Emergency Service (SES) headquarters, and New York City Fire Department Headquarters, both listed in the New York State Registry of Historic Places. Edwin F. Cady Middle School, a school in the Dallas Independent School District, Texas, listed on the National Register of Historic Places. The Saint John's School library in Beverly, Massachusetts. The Houston ISD's Spires junior high and high schools. Texas Tech University's Dodge Sports Center. The University of Oregon's Chalice Center. The Homewood-Flossmoor High School library in Flossmoor, Illinois. The Massachusetts Institute of Technology (MIT) Busch Campus. of the features that a modern editor could offer. "Dynamically Typed Blocks" are blocks with the attributes "Dynamic", "Block" and "Abstract" set. They have different interfaces depending on the specifics of the block type and the functionality of the blocks. For example, FEA blocks can have solutions stored on them, properties can be set dynamically and they can be categorized. They are designed to support many features, including complex solutions, many properties, and collaboration. "Open Design Automation Collaboration (OpenDAC)". OpenDAC is an open source project that extends the Application Programming Interface (API) for AutoCAD. Unlike many other extensions, OpenDAC is not based on Visual LISP and does not require a separate AutoLISP interpreter. OpenDAC is a cross-platform extension, meaning it works on both Windows and Linux. The programming interface of OpenDAC is a collection of public functions and message numbers. OpenDAC also provides a plugin interface, similar to that of Visual LISP. OpenDAC was introduced in version 2015 and is expected to be included in future releases of AutoCAD. "Aria" is a plugin which augments the typical.dwg file. It is used for creating and modifying a template file. "NeoFusion" is a plugin which extends the functionality of Neofimage, the plug-in editor that is currently included in AutoCAD. NeoFusion includes a plug-in interface and programming API. "NeoLisp" is an example of AutoLISP. AutoLISP is an extension of the Visual LISP scripting language which allows users to create their own functions and scripts for use in AutoCAD. "Dr. Scatter" is a standalone windows application for creating and editing 2D and 3D models in AutoCAD. Import your own or your client's changes to drawings. Your changes are saved into the drawing so you can make other changes to the drawing and continue to collaborate without the need to resend the drawing. (video: 1:42 min.) Markup Assist: Maintain the context of your drawings and make quick adjustments with AutoCAD's new radial menu. Markups will be organized and placed on the existing layout, allowing you to take advantage of your existing design without having to create a separate drawing to keep your context. (video: 1:45 min.) Batch editing for precision: Send Markups to any number of drawings in the same way. Each drawing you create gets its own marker, not the same marker used for previous edits.
