This is the default display. It's the same for all users and is the window that'll show up when you sign into your computer. Click to enlarge That's the main window. The middle left area is a 'drop zone'. You drop an image file here to be used as the desktop wallpaper. You can drag the window around if you want to adjust where the image is placed. You can drag any file type here and it will load the image into your primary display. Next you get the multi-monitor preview window. This one is only visible when you are using more than one display. As you can see, the first thing you'll see here is the drop zone. This window is similar to the primary window, but now you have a resizing tool to resize the image to fit any monitor. In both windows you'll see a "Settings" button. This opens the settings menu. You'll notice that it's got some pretty cool advanced options to control the behavior of the utility. The settings menu options Advanced options I created this project for my own personal use. It was originally a simple application that used a TIFF file with a 1280x800 size. I made a couple of small adjustments so it would automatically resize images to fit each monitor. I also made it make duplicate copies so you don't have to keep going to the desktop to see what's on each display. I've included this project in a freebie pack. You can grab it from here. You should be able to just drop the contents of the project folder into your program files folder (or extract them). To keep things clean, I added some options to the menu and provided a readme. All the source is included in the zip file, it's not like some of the other projects where you need to download some XML files. Also included is a one page "installer" that's for Windows 7, XP and Vista. You can either run the executable directly or the executable will create a shortcut for itself in your start menu, or the file properties dialog can be used to install the utility. This is a 32-bit Windows application and must be installed in either the Program Files folder or the Program Files (x86) folder. It won't run correctly on 64-bit Windows operating systems. The executable runs in both 32 and 64-bit Windows operating systems. When you launch MultiWall, you'll see

What's New In MultiWall?

MultiWall - Change your Desktop Wallpaper freely MultiWall - Change your Desktop Wallpaper freely MultiWall is a simple software application that can manage your wallpapers on multiple monitors. User-friendly interface All the functions are organized in a single window. This area holds many of the predefined wallpapers, and new ones can be added using the browser function. This section displays new images downloaded from Imgur. Apply effects to your wallpapers The wallpaper can be edited before you use it. You can change the background color, rotate the photo to different angles, crop the images, and center or stretch the items. Moreover, you can process the file by adding different filters like grayscale, sepia or picture reflection. When using the picture reflection you get an instant mirror effect for the wallpaper. Use popular picture formats The app can detect all or individual monitors and switch between them using a drop-down list from the main window. More items can be added into the list by browsing to their folder. The utility can add BMP, JPG, PNG, TIFF or GIF file formats. You can share the image using a cloud service, but you have to respect the minimum picture dimensions (1920X1080 pixels) and the 10MB limit. The program can also be instructed to run at startup or automatically apply the wallpapers you select from the list. Furthermore, by using the built-in "Crawler" function you can search through multiple categories from Reddit or Microsoft for themed images. You can download the desired images from the preset websites, which are displayed in the preview area. If you find a picture you like, use the "Import" button to add it to your collection. The image search can also be conducted automatically. Conclusion Taking all things into consideration, MultiWall is a handy tool for users who want to download and edit the latest wallpapers available from popular websites.
