1. Field of the Invention The invention relates to an opto-electronic sensor arrangement comprising a carrier with a sensor component that is provided with an integrated circuit and that is located in a housing with a window. 2. Description of the Related Art An opto-electronic sensor arrangement of this kind is known, for example, from EP-A-0 786 789, FIGS. 4 and 5. The opto-electronic sensor arrangement has a carrier with a sensor component, which is provided with an integrated circuit. The carrier is located in a housing with a window, such that, when the window is in the open position, i.e., in the position in which the window allows the insertion of light and image-forming optics, optical coupling between the sensor component and the optical transmitter is achieved by way of the window. One of the problems when coupling in light and image-forming optics is that the window must be sealed off against environmental influences in order to prevent ingress of dirt or moisture. According to the related art, this problem is solved by means of a housing cover that is placed over the housing, which housing cover has a hole that is smaller than the window and therefore creates a seal that ensures that there is no environmental influence when it is open. However, this known solution has the disadvantage that production and assembly of the opto-electronic sensor arrangement is complicated.Q: Move PDFs from one drive to another folder using PowerShell I'm trying to move PDFs from a SharePoint library to a different (mapped) network drive. I can easily do it with Powershell or even by hand but when I try to run it via my Forefront TMG 2010 via GPO, it fails. The error (Unspecified Error) goes away, when I remove the setting for the drive. Is it possible to do this via GPO? A: First, be sure to use a verbose error. When you say it fails, does it say anything? If it doesn't you should at least know where it fails. Otherwise you could spend weeks tracking down the issue. Second, the error you say is documented behavior for TMG Access Control Checks. If you do not have global access in SP control panel, you'll have to create one and add the

What happened to the prior Art of the Pen? The Art of the Pen has certainly expanded in the past 8 years to include "strategic writing" or "strategic communication". All this means is that pen and paper (and any other tools like a laptop, a computer, your smartphone or the coffee table) are used for "strategic communication", whatever that means. Not actually to write letters. From the beginning of the AotP there has been little respect for actual letter-writing. In fact, at the beginning of the AotP we saw numerous references to "implementing creative writing", "striving for an authentic voice", "moving beyond the corporate culture", and even "offering flexibility". These things are (should be) of paramount importance for the Art of the Pen. So where has the art of writing (for letter-writing purposes) gone? It seems that "strategic writing" is left for those who use a laptop and a smartphone, and a pen and paper is relegated to "creative writing" by those for whom a smartphone is a fashion accessory. There is no Art of the Pen left for the letter-writer. (And the Art of the Pen, by its nature, is non-corporate.)Q: Why are some IO operations slower than others? I was reading this article about performance tests comparing various C libraries: And one of the points I learned was that some IO operations were really slow: Now, I was hoping to learn why exactly this is the case, but I'm quite lost. Can somebody explain to me how these operations are slow? Any explanation would be greatly appreciated! Thanks! A: The file systems are not optimized for random reads or writes. If you open a file and then randomly read (write) a byte or bytes from that file, the number of disk I/O operations (flushes) required is more likely to be significantly higher than if you are constantly writing (reading) from (to) the same file. Because of this, most file systems do not perform well on operations that are infrequently repeated. A: While there are methods available to increase
