Tip To create a portable disc to install Photoshop on a computer, click Save as Type Portable Document, and save as a.psd file. To upload that file for Photoshop trials or an older version, drag the file from the Finder window onto the Photoshop icon in the Finder window. The most current version of Photoshop is also available for the Mac and Windows. If you have a registered Macintosh Computer or Windows Vista computer, you can download Photoshop from Adobe's web site. You won't be asked for a payment and you'll receive an activation disc. This will allow you to install the program on multiple computers; the maximum number of computers you can install it on is 10. The version of Photoshop for the Mac is also available in a trial version (until the end of July 2010). ## The Photoshop Interface You can edit a single photo or dozens or more. In this way, Photoshop fills the gap between photo editors like Photoshop Elements and more complete editors like Adobe Lightroom. Photoshop's interface is based on a feature called layers—each image file and document is represented by a series of tiny squares. You can perform all your image manipulations on a single layer, which is called the active layer. While you're on that layer, you can change the color,

In this beginner's guide, you'll learn how to: ✓ Delete objects like faces, trees and buildings ✓ Edit colors like blue, green, red and yellow ✓ Open and work with files in all the available file formats ✓ Use the new layer, selection, and transform tools ✓ Sharpen images by adjusting their curves ✓ Edit special effects like blur and vignette ✓ Add special effects like filters and animations ✓ Layer materials like textures ✓ Measure, crop and resize images ✓ Build a collage Learn how to edit your photos in Photoshop Elements in this infographic: Get started with Elements by editing these sample images: Shares[Application of the entomological surveillance system of *Viannia* sp in the city of Presidente Prudente (SP), Paraná, Brazil, 2007-2010]. The Amazon region is the main vector reservoir of visceral leishmaniasis, the most relevant clinical form in Brazil. The city of Presidente Prudente (SP), Paraná, is located in the coastal portion of the state of São Paulo. Due to the proximity of non-endemic areas, this city is considered at high risk of autochthonous cases. The Entomological Surveillance System is an effective method for the early detection and control of vector transmission. The aim of this study was to analyze the influence of the epidemiological conditions on the entomological surveillance, as well as the degree of concordance between collected and expected data. Weekly data on the entomological surveillance over a period of seven years (from 2007 to 2010) were evaluated for the city of Presidente Prudente, Paraná, Brazil. For each week, ATS and PTA were calculated. The associated data from the leishmaniasis epidemiology module of the Disease Notification System of the Health Ministry were analyzed as well. A positive correlation between the PTA and ATS was observed for "**Viannia* species*" ($r=0.99$; p 05a79cecff

Analysis of simian virus 40 mutants with mutations in the enhancer. Analysis of simian virus 40 (SV40) mutants with mutations at the enhancer-promoter junction of the late regions of the genome has revealed that five of the six direct repeat sequences which bind to the cellular transcription factor II D (TFII D) are essential for optimum enhancer activity, and in particular the nucleotides at positions -31 and -32 are essential. The presence of two extra copies of this region does not increase the level of transcription. Analysis of the infectivity of the mutants indicates that the bases at positions -25 and -26, and perhaps position -27, are involved in a cis-acting autoregulation of transcription from the late regions. Osmoregulation and carotenoid accumulation in the green alga *Enteromorpha intestinalis*. 1. Starvation of the green alga *Enteromorpha intestinalis* increased both carotenoid accumulation and the level of intracellular Na⁺ in a fashion which was similar to that in many other unicellular algae. 2. Although the pattern of Na⁺ accumulation during osmotic adjustment at various osmotic media varied, Na⁺ accumulation preceded carotenoid accumulation during osmotic adjustment. 3. Carotenoid accumulation during osmotic adjustment occurred in parallel with a decline in dissolved CO₂. Decreased K⁺ and Cl⁻ levels were not found to alter carotenoid accumulation. 4. It is suggested that carotenoid accumulation in *E. intestinalis* is triggered as a result of a lowered energy state which is induced when Na⁺ and CO₂ levels decline during the adaptation to low extracellular osmolality. Phoenix is the most common place for the Arizona Diamondbacks to play, but the season will be their home opener at the Tokyo Dome in Tokyo on March 28 and Japanese star Ichiro Suzuki (who was inducted into the National Baseball Hall of Fame on Tuesday) will be pitching for his old team. The 32-year-old Suzuki is the marquee free agent this offseason, and while his market might be small, free-agent signings for Japanese players are almost nonexistent. It's possible that Suzuki may sign a short-term contract and return to the Majors as soon as the new year. "They'll be here for the World Baseball Classic [in March] and we'll talk things up in January," Diamond

Maintenance of latency-associated HIV-1 DNA in resting CD4⁺ T cells of long-term nonprogressors. It has long been postulated that a small population of latently infected cells is responsible for the long-term reservoir of provirus in HIV-1-infected individuals. However, the long-term persistence of human cytomegalovirus (HCMV) has been demonstrated in resting CD4⁽⁺⁾ cells of HCMV-infected individuals, but the infectious virus was not detected. The latent human T-lymphotropic virus type I (HTLV-I) is not found in resting cells, but it is integrated into chromosomal DNA of the host. We investigated whether a similar phenomenon occurs with HIV-1 latency. We isolated CD4⁽⁺⁾ cells from the peripheral blood of 44 HIV-1-infected individuals and carried out HIV-1 PCR amplification and Southern blot hybridization assays to detect provirus and the integrated long terminal repeat (LTR) of HIV-1 in resting CD4⁽⁺⁾ T cells. We found that a variable number of infected CD4⁽⁺⁾ T cells (median, 0.12%) harbor provirus. These cells are clonally expanded and display no evidence of productive virus infection. HIV-1 transcriptional activity in these long-term nonprogressors correlates with the provirus copy number. For each infected cell, the integrated LTR is in transcriptionally active status. These data suggest that a rare subset of resting CD4⁽⁺⁾ cells of HIV-1-infected individuals harbor the replication-competent provirus but are transcriptionally silent and without evidence of productive virus infection. As long as these cells remain, the persistent reservoir of HIV-1 is likely to provide a major barrier to the eradication of HIV-1 infection. Q: Sharing localhost public url to printer I have a PHP script that reports errors and outputs them on my local host. Question How can I share that public URL link to my Brother MFC-8440 that is connected to the same network and can access the printer on the local host with IP 192.168.1.102? A: You can use php-fpm and php-fcgi (or something like that), if you wish to run your script with a local process. There are some examples on net: for instance, this answer at ServerFault. The reason you'd use php
